<u>Steps to play Ling Valley:</u>

1. Download the zip folder that is sent. Once downloaded, go to File Explorer and select the zip folder. Right-click it and select "Extract All…"
2. Extract the zip folder at the current location or any location you prefer. Select "Extract" and now you will be presented with a File folder named "LingValley."
3. Head to https://code.visualstudio.com/ and click "Download for Windows." Once downloaded, click on the executable and select "I accept the agreement." Select next until you reach the installation page. Click on "Finish."
4. Head to https://www.python.org/downloads/windows/ and scroll down until you reach "Python 3.10.5 - June 6, 2022." Download the Windows Installer (32-bit). Open the executable and click on the checkbox "Add Python 3.10 to PATH."
5. Go to VisualStudioCode and on the top-left, click on File, click on Open Folder. Click on the "LingValley" folder and click on code, then press on "Select Folder." The left-hand side of your VisualStudioCode should look like it has all the python programs(i.e. level.py, main.py, overlay.py, etc.)
6. On the top of VisualStudioCode, on the dropdown bar, click on Terminal and click on "New Terminal." In the terminal, enter "pip3 install pygame."
7. Once pygame is installed, click on "main.py" on the left hand side of the screen. Then on the top-right of the screen, press the triangle-shaped play button.
8. If you need the instructions, you can click on the README.txt on the left hand side or click on it through your folder in the file explorer. Enjoy the game!
